

ASX Announcement
30 July 2015

QUARTERLY REPORT FOR THE PERIOD ENDING 30 JUNE 2015

HIGHLIGHTS

- ❖ Exploration continued at the high grade Topacio Gold Project in Nicaragua, which contains a 340,000oz gold resource
- ❖ “Bonanza” gold grades from rock chip samples in the Topacio resource area:
 - Dispute vein - up to 92.9 g/t gold and 220 g/t silver
 - Dos Amigos vein - up to 38.5 g/t gold
- ❖ Strong gold results in the broader epithermal vein system northwest of Topacio, and at Buena Vista in the northeast of the concession, indicate potential for resource expansion:
 - West Mico vein - up to 23.9 g/t gold
 - Celedonio vein - up to 12.6 g/t gold and 65 g/t silver
 - Chicago vein - up to 7.98 g/t gold
 - Buena Vista area - up to 3.35 g/t gold and 50 g/t silver
- ❖ Environmental application in process for the San Isidro Gold Project – approval awaited
- ❖ Successful placement and SPP raised funds to advance exploration programs and working capital

Oro Verde Limited (ASX: OVL) (“Oro Verde” or “the Company”) is pleased to provide its quarterly report for the period ending 30 June 2015.

TOPACIO GOLD PROJECT

On 27 February 2015¹, the Company announced that it would proceed with the Option to Purchase Agreement to acquire 100% of the highly prospective Topacio Gold Project located in southeastern Nicaragua (Figure 1).

High grade gold (Au) and silver (Ag) results from rock chip sampling provide strong support for the potential of the project, not only in the area of the existing resource but also in under-explored portions of this large, mineralised, epithermal vein system.

‘Bonanza’ gold grades up to 92.9 g/t Au and silver grades up to 480 g/t Ag have been encountered in sample analyses during the quarter, indicating the upside potential of this project.

For personal use only

ROCK CHIP SAMPLING

Reconnaissance mapping and sampling during the quarter concentrated on a number of different areas of the large under-explored 93km² concession (tenement), including:

- Topacio resource area - Dispute and Dos Amigos veins
- Northwest area - West Mico, Celedonio, Chicago and Gallina veins
- Buena Vista area - Buena Vista prospect

Topacio Resource Area

Sampling was undertaken by the Company on some of the exposed veins within the Topacio resource area, including the Dispute and Dos Amigos veins (Figure 3), where 'bonanza' gold grades were encountered.

Sampling from the historic 'Dispute' quartz vein in particular, returned a **1 metre channel sample grading 89.3 g/t Au and 220 g/t Ag**. A split of the 'bonanza' grade sample pulp assayed 92.9 g/t Au, confirming excellent repeatability. This is the Company's highest gold result to date from the Topacio Gold Project. Other samples collected from the Dispute vein included vein material from a small ore pile (sample #48594) that returned 22.6 g/t Au and 65.5 g/t Ag (Table 1), as well as a 1.1 metre channel sample of quartz vein material that assayed 5.1 g/t Au.

- Sample 48589 – **89.3 g/t Au and 220 g/t Ag** (1m channel sample)
- Sample 48589R – **92.9 g/t Au** (repeat Au assay from pulp split of 48589)
- Sample 48594 – **22.6 g/t Au and 65.5 g/t Ag**

The **Dos Amigos** vein runs parallel to the Dispute vein (Figure 3) and includes a shallow pit approximately 8 metres deep and 60 metres length, excavated by artisanal miners on a 1 to 1.5 metre wide steeply dipping quartz vein. This initial sampling has confirmed that the quartz vein contains some very high grade zones (Table 1).

Two rock chip samples from the vein and an ore pile sample returned the following very high gold grades with associated silver (Table 1):

- Sample 48520 – **33.6 g/t Au and 47.9 g/t Ag**
- Sample 48521 – **38.5 g/t Au and 39.3 g/t Ag**
- Sample 48522 – **23.5 g/t Au and 55.3 g/t Ag** (sampled ore pile)

Northwest Area

The Company's reconnaissance campaigns continue to confirm additional undrilled gold targets outside the historical Topacio Gold Project inferred resource area, such as the Northwest Area and Buena Vista (Figure 2).

Reconnaissance mapping and sampling was undertaken by the Company on a number of exposed veins located to the northwest of the Topacio resource area (Figure 3). While parts of the Mico vein have been included in the historic resource estimate for the Topacio Gold Project¹, the western extension of the Mico vein is outside of the estimated resource area.

Sampling from old workings, outcrops and road cuts to the northwest contained numerous high grade gold values (see below) with the highest coming from the West Mico vein dumps and a 2.2m channel sample along a road cut (Table 1). These results confirm that the western extension of the Mico vein could provide additional gold resources.

- **West Mico vein**
 - Sample 48555 – **10.8 g/t Au**
 - Sample 48557 – **23.9 g/t Au**
 - Sample 48558 – **21.4 g/t Au and 25.8 g/t Ag**

For personal use only

In addition to the West Mico vein, other veins assessed during the quarter included the Celedonio, Gallina, Chicago and Northwest Mico areas^{2,3}. Encouraging results from each of these veins/areas provide further evidence of the potential to increase the current resource in the northwestern section.

- **Celedonio vein**
 - Sample 48579 – **12.6 g/t Au and 64.7 g/t Ag**
- **Chicago vein**
 - Sample 48554 – **7.98 g/t Au and 25.6 g/t Ag**
- **Gallina vein**
 - Sample 48543 – **6.49 g/t**
- **Northwest Mico**
 - Sample 48577 – **6.75 g/t Au and 21.4 g/t Ag**

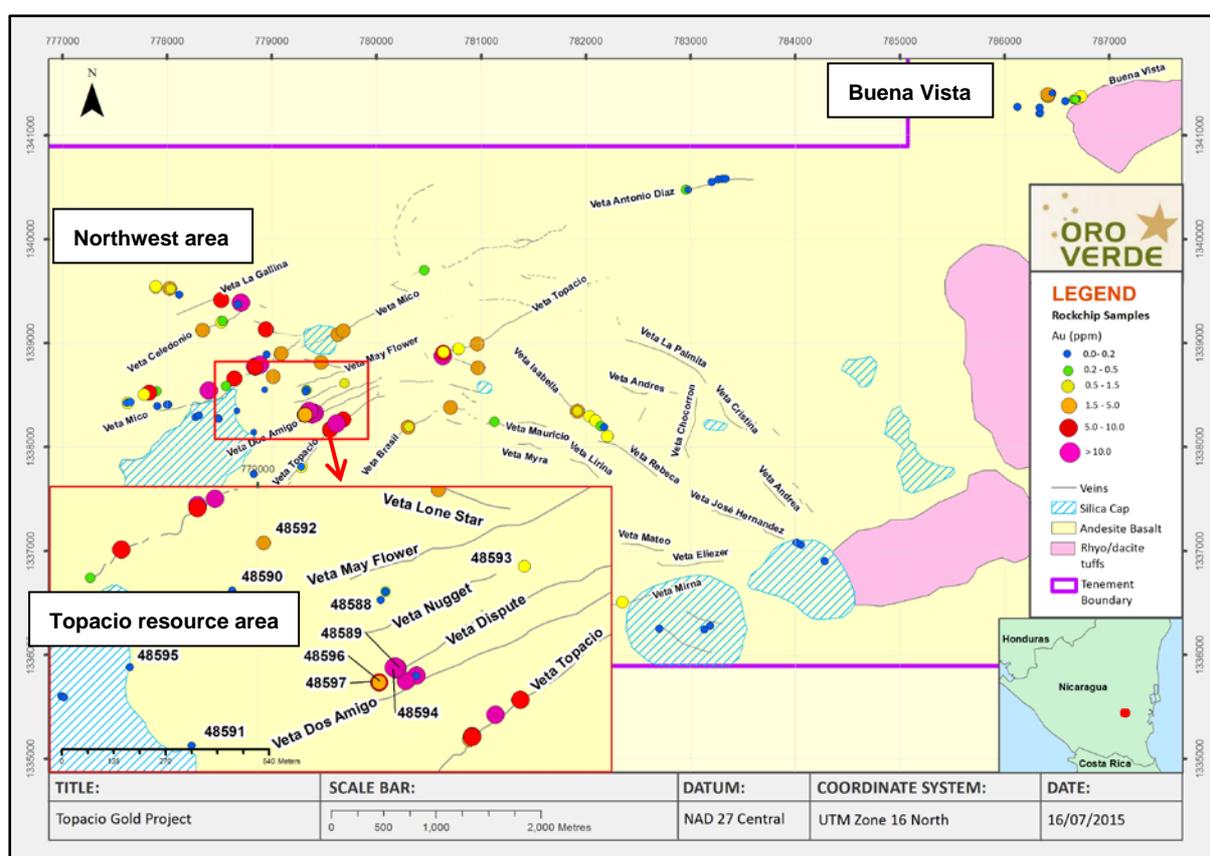

Figure 3 Topacio Gold Project – OVL rock chip sampling results

Buena Vista Area

The Buena Vista area, some six kilometres to the northeast of the Topacio resource area (Figures 2 and 3), was visited to investigate a historical rock chip sample result of over 2 g/t Au. A number of adits (tunnels) and a small pit were encountered. The adits have not yet been entered as suitable safety equipment was not on hand, but they appear to be well developed and oriented to cut a northeasterly trending silicified zone.

Three rock chip samples were initially collected from the zone external to the adits. Sample number 48524 returned a surprisingly anomalous gold grade of 2.97 g/t Au⁴. In a subsequent visit, a repeat

² Refer to ASX announcement dated 15 June 2015 “High Gold Grades from West Mico Vein at Topacio”

³ Refer to ASX announcement dated 7 July 2015 “West Mico Gold Vein Area Shapes Up”

⁴ Refer to ASX announcement dated 5 May 2015 “Dos Amigos Vein Returns Over 1oz/t Gold in Shallow Pit”

For personal use only

sample was collected from the same subcrop as sample 48524 and the 3.35g/t Au result successfully confirmed the presence of anomalous gold mineralisation.

In contrast to the massive quartz veins encountered at the Topacio resource area, Buena Vista mineralisation appears to be disseminated within silicified felsic volcanic rocks containing fine quartz veinlets. This different style of mineralisation provides significant encouragement that the Buena Vista prospect area may contain large volume economic mineralisation, and maybe an indicator of a deeper buried epithermal system of mineralisation.

Additional mapping and sampling of this new mineralised zone at Buena Vista is scheduled in the coming months.

REGISTRATION OF AGREEMENT

The Option to Purchase Agreement over the Topacio Gold Project was registered with the Nicaraguan Department of Energy and Mines (Ministerio de Energia y Minas – MEM) during the quarter. This is an important step towards having Oro Verde Limited (or its subsidiary) recognised as the operator of the concession for planned drilling programs under existing work/environmental permits.

Table 1 Topacio - Summary of June quarter Oro Verde sampling: gold (Au>5g/t) and silver grades

SAMPLE NUMBER	NORTHING	EASTING	VEIN	SAMPLE TYPE	Au (g/t)	Ag (g/t)

BACKGROUND

The 93 km² Topacio Gold Project concession contains a number of artisanal gold mine workings with the main gold showings of importance consisting of generally east-northeast striking and steeply dipping, one to three metre wide epithermal quartz veins, six of which were mined in the period from 1900 to 1917, with an estimated 160,000 tonnes grading approximately 8 g/t gold and 80 g/t silver extracted.

The project boasts a historical NI 43-101 (Canadian standard, similar to JORC) compliant Inferred Resource of:

2,716,176 tonnes at 3.9 g/t gold, containing 340,345 ounces of gold, at a 1.5 g/t gold cut-off⁶

National Instrument 43-101 (“NI 43-101”) is a national instrument for the *Standards of Disclosure for Mineral Projects* within Canada and as such this estimate is a foreign estimate and is not reported in accordance with the JORC Code. A competent person has not done sufficient work to classify the foreign estimate as mineral resources in accordance with the JORC code and it is uncertain that following evaluation and/or further exploration work that the foreign estimate will be able to be reported as mineral resources in accordance with the JORC code.

SAN ISIDRO GOLD PROJECT (Nicaragua - 100% OVL)

Oro Verde is the holder of a 2,520 hectare mining concession located adjacent to the 2.3 million ounce La India gold resource (Condor Gold plc) in northwestern Nicaragua (Figure 1). The San Isidro Gold Project adjoins the eastern boundary of the La India Project. One of Condor’s deposits is the historical Cristalito gold mine on which a small, high grade gold deposit has been identified. Hosted within quartz veins and shear zones, this mineralised zone appears to trend northeasterly into the San Isidro property.

The Company is currently awaiting approval for its environmental and community requirements prior to a reconnaissance mapping and sampling program anticipated to commence in the third quarter of 2015.

WORK PROGRAM

The Company’s forward work program is likely to focus on the following (Table 2):

Topacio Gold Project

1. Finalising environmental and social responsibilities leading to a drill program late 2015
2. Drilling to confirm, expand and report the existing gold resource in accordance with JORC (2012) Guidelines
3. Identification of new targets within the broader project area

San Isidro Gold Project

4. Await exploration permit to commence geological mapping and sampling to define targets

CORPORATE

During the quarter, the Company completed a placement of shares that raised \$250,000 at 0.6c/share. In addition to the placement, existing Oro Verde Limited shareholders were given the opportunity to participate in the capital raising via a Share Purchase Plan (SPP) at equivalent pricing. A total of \$286,500 was raised through the SPP. These funding initiatives have provided the Company with an additional \$536,500 destined for Nicaraguan exploration activities and working capital.

At 30 June 2015, the Company had 448,948,408 shares on issue and \$535,000 cash on hand.

About Oro Verde Limited: *Oro Verde Ltd is a mineral exploration company focused on identifying and developing significant gold projects in Central America, particularly Nicaragua. Oro Verde has secured an Option to Purchase Agreement over the Topacio Gold Project in Nicaragua that currently contains a NI 43-101 compliant Inferred Mineral Resource of 340,000 ounces of gold. Oro Verde also holds 100% of the early stage San Isidro Gold Project located adjacent to the 2.3 million ounce La India gold project.*

Notes

- 1 The report provides a basis for informing the market how the entity's activities have been financed for the past period and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
